- List of abbreviations

1. Summary
2. Zusammenfassung
3. Introduction
   3.1. Essential hypertension
      3.1.1. Size of the problem and cardiovascular risk
      3.1.2. Blood pressure regulating mechanisms
      3.1.3. Essential hypertension as a consequence of chronic elevated
central and renal sympathetic tone
   3.2. Hypertensive heart disease
      3.2.1. LV remodeling and myocardial hypertrophy
      3.2.1.1. Echocardiographic diagnosis of LVH
      3.2.2. Left atrial remodeling in HTN
      3.2.2.1. Consequences of LA remodeling in HTN
      3.2.2.2. Echocardiographic assessment of LA structural remodelling
      3.2.3. Neurohormonal disturbances associate LA and LV remodeling with
HTN
      3.2.4. Diastolic dysfunction in hypertensive heart
      3.2.4.1. Problem of heart failure with preserved ejection fraction
(HFPEF)
   3.3. Echocardiographic assessment of diastolic function in hypertensive
patients
      3.3.1. Blood flow Doppler assessment of LV diastolic function
      3.3.2. Assessment of LV diastolic function using Tissue Doppler Imaging
(TDI)
      3.3.3. Need for newly applied techniques in the assessment of diastolic
function
   3.4. Strain and strain rate imaging (SRI)
      3.4.1. Speckle-tracking derived two-dimensional (2D)-strain
3.4.2. Emerging role of SRI in the evaluation of hypertensive heart disease…………………………………………………………………………………20
  3.4.2.1. SRI in the assessment of diastolic function……………………………20
  3.4.2.2. SRI in the assessment of systolic function……………………………20

3.5. Mitral annular plane systolic excursion (MAPSE)…………………………..21
  3.5.1. Background………………………………………………………………………21
  3.5.2. Functional importance and clinical application……………………………22

3.6. Poor treatment reality……………………………………………………………23
  3.6.1. Therapeutic approaches in the management of HTN…………………23
  3.6.2. Problem of resistant HTN…………………………………………………24

3.7. Renal sympathetic denervation (RD)…………………………………………25

4. Aim of the study……………………………………………………………………27

5. Methods…………………………………………………………………………………28
  5.1. Patient population…………………………………………………………………..28
  5.2. Renal sympathetic denervation procedure…………………………………..28
  5.3. Echocardiography…………………………………………………………………29
    5.3.1. Determination of 2D echocardiographic parameters
          ……………………………………………………………………………………29
    5.3.2. Mitral annular plane systolic excursion (MAPSE)…………………..32
    5.3.3. Pulsed wave (PW) Doppler and Tissue Doppler imaging (TD)….32
    5.3.4. SRI data Analysis……………………………………………………………34

6. Statistics…………………………………………………………………………………..37

7. Results…………………………………………………………………………………..38
  7.1. Patient baseline characteristics…………………………………………………..38
  7.2. Effect of RD on hemodynamic…………………………………………………..40
  7.3. Changes in cardiac structures in response to renal denervation………..45
  7.4. Changes in systolic function in response to renal denervation………..49
  7.5. Changes in diastolic function in response to renal denervation………..51
    7.5.1 Blood flow Doppler and TDI assessment of left ventricular
dysfunction during diastole………………………………………………………51
7.5.2. Change in Left Ventricular Filling Patterns..............................58
7.6. Strain and strain rate imaging (SRI)........................................59
    7.6.1. Systolic SRI parameters.............................................59
    7.6.2 Diastolic SRI parameters..............................................62
7.7. Linear correlation results between changes in different parameters 6
    months after RD...............................................................64
    7.7.1. Correlation between changes in systolic and diastolic SRI
            parameters..............................................................67
    7.7.2. Correlation between changes in diastolic parameters derived from
            SRI and changes in the standard conventional diastolic
            parameters..............................................................67
    7.7.3. Correlation between the changes in global systolic SRI and LV
            parameters..............................................................68
    7.7.4. Correlations between different other parameters in response to
            treatment of resistant HTN using RD..................................68
8. Discussion.............................................................................74
    8.1. Effect of RD on hemodynamic............................................74
    8.2. Effect of RD on different echocardiographic parameters.............75
        8.2.1. Regression of the left ventricular hypertrophy...............75
        8.2.2. Effect of RD on diastolic function...............................77
        8.2.3. Effect of RD on LA volume.......................................79
        8.2.4. Effect of RD on systolic Function................................81
        8.2.5. Impact of RD on 2D echocardiography SRI parameters.......82
            8.2.5.1. Impact of RD on diastolic SRI parameters...............82
            8.2.5.2. Impact of RD on systolic SRI parameters.................84
9. Limitations of the Study.............................................................87
10. References............................................................................88
11. Publications...........................................................................116
12. Acknowledgement...................................................................117
13. Curriculum Vitae.....................................................................119
List of abbreviations

A2C: apical 2-chamber view
A4C: apical 4-chamber view
ACE: angiotensin-converting enzyme
AF: atrial fibrillation
ARBs: angiotensin receptor blockers
BP: blood pressure
CNS: central nervous system
CO: cardiac output
DBP: diastolic blood pressure
DD: diastolic dysfunction
DT: deceleration time
EF: ejection fraction
EDD: end-diastolic diameter
ESD: end-systolic dimension
GS or (SISYS): global systolic longitudinal strain
GSR or (SRSYS): global systolic strain rate
HFPEF: heart failure with preserved ejection fraction
HR: heart rate
HTN: hypertension
IVRT: isovolumetric LV relaxation time
IVS: interventricular septum
LA: left atrium
LAVI: left atrial volume index
LV: left ventricle
LVMI: left ventricular mass index
LVH: left ventricular hypertrophy
MAPSE: mitral annular plane systolic excursion
PWTd: posterior wall thickness at end diastole
PW: pulsed Doppler
RD: renal denervation
RF: radiofrequency
SBP: systolic blood pressure
SNS: sympathetic nervous system
SRE: early diastolic strain rate
SRI: strain rate imaging
SRL: late diastolic strain rate
SV: stroke volume
TDI: tissue Doppler imaging
